Custom Product Attribute Export
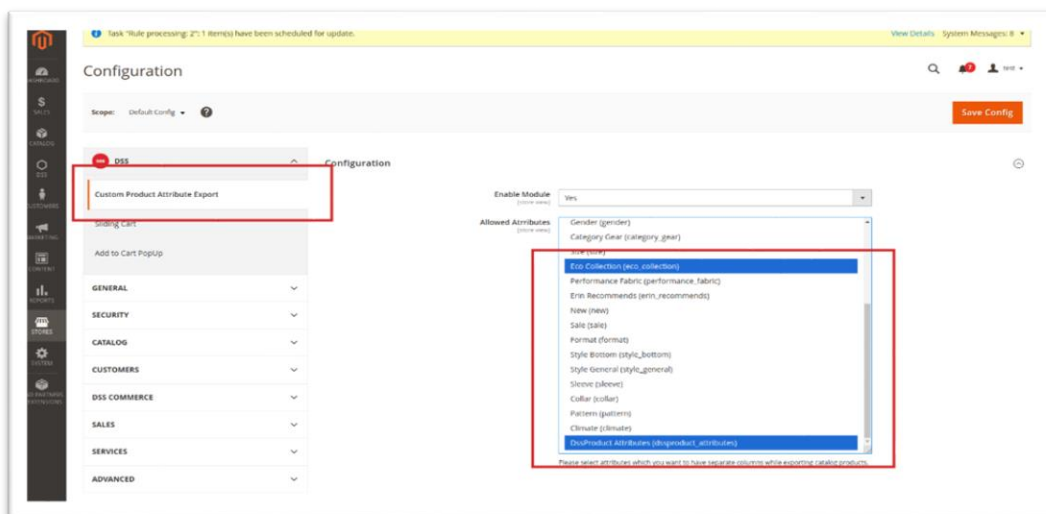

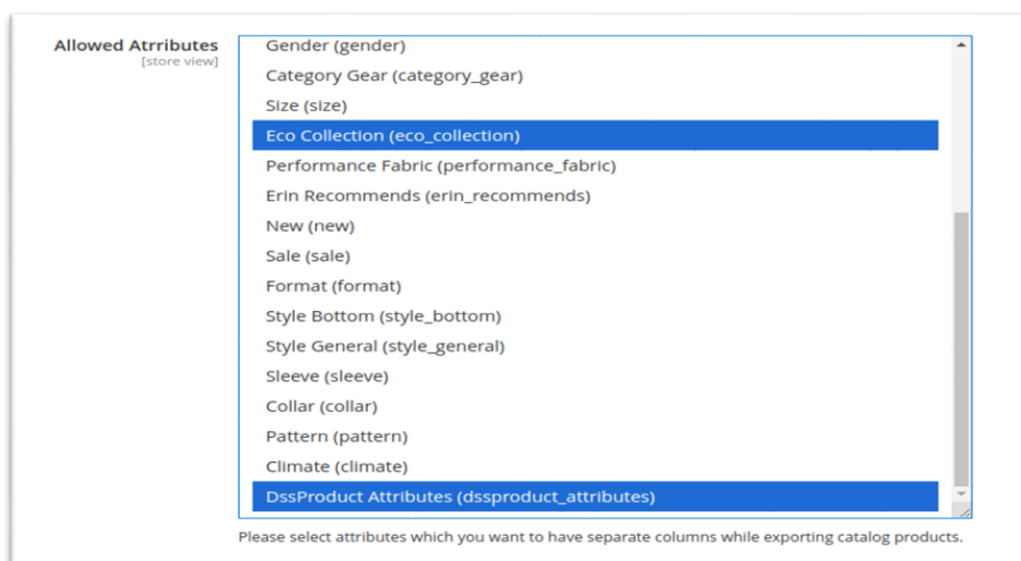

DSS

1. How Does It Works?

1.1 Module Configuration:

Navigate to Stores => Configuration => DSS => Custom Product Attribute Export => Configuration.

1.2 General Configuration:

- **Enable Module:** Choose to Yes to enable the Module.
- **Allowed Attribute:** Choose for your any custom attribute which you export within the product.

- **Choose Any Attribute:** You can choose any attributes which might you required with product.
- **Save Config:** After Choosing the attributes you should click on save config button.

1.3 How to Work?:

- Navigate to System => Export => Entity Type = 'products' => Export File Format = 'CSV' => Check the sku of a product => Enter the product sku

  Now, on the click on continue button it will generate the csv file and after downloading them the file contains the all product's attributes.

  And also contains selected custom attributes which we select from our custom module's configuration are displayed in separated columns.
